What is an intent?

An intent is a collection of user statements that have the same meaning. By creating intents, you train your assistant to understand the variety of ways users express a goal. [Learn more](#)

You will find some pre-made intents in the content catalog. [Browse content catalog](#)

Create intent +Upload intents

Activate Windows  
Go to Settings to activate Windows.

**STEP 13:** Now create an intent for opening the chat and add the example which user ask the questions.

About dialogs

A dialog is where you develop branching interaction flows for conversations between your customers and your assistant.

You design conversations using intents and entities so that your assistant responds appropriately to what your customers are saying.

The screenshot shows the IBM Watson Assistant interface. On the left, the 'Dialog' tab is selected in the sidebar. The main area displays a dialog node named 'welcome-node' with the text 'welcome' and a response of '1 Responses / 0 Context Set / Does not return'. Below this, there is a section for 'Assistant responds' with a dropdown menu set to 'Text'. Two response variations are listed: 'Sure, what you Need' and 'Sure, What order can I take for you', both of which are highlighted with a red rectangular box. The interface also includes buttons for 'Add node', 'Add child node', and 'Add folder' at the top, and a 'Try it' button in the top right corner.

**STEP 16:** Now we have to create an entity for that click on create entity.

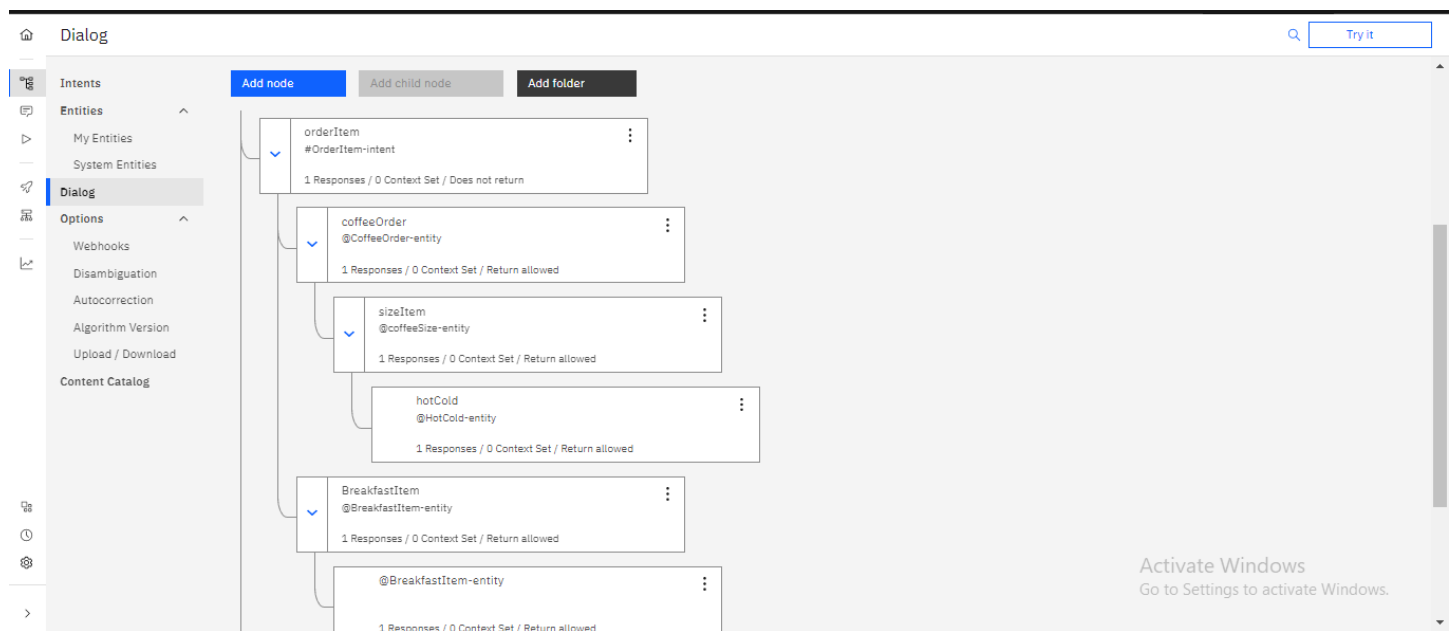

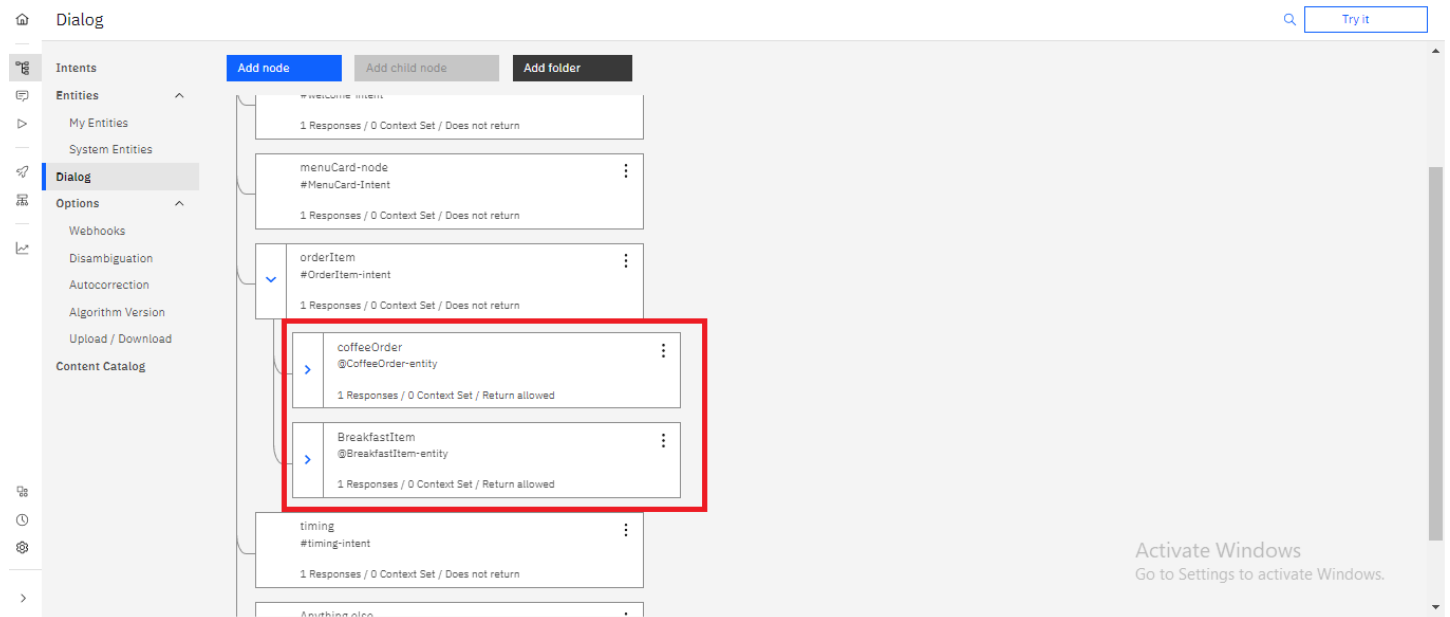

The screenshot shows the 'My Entities' page in the IBM Watson Assistant interface. The sidebar on the left has 'My Entities' selected. The main area features a large circular icon with a network diagram and the heading 'What is an entity?'. Below this, there is explanatory text about entities and a link to 'Learn more'. At the bottom, there is a blue button labeled 'Create entity' with a plus sign, which is highlighted with a red rectangular box. To the right of this button is a link labeled 'Upload entities'. The interface also includes a 'Try it' button in the top right corner and an 'Activate Windows' watermark at the bottom right.

**STEP 17:** Now add a child node and train it for enat

## STEP 18: After training our chatbot/assistant is ready.

# Final result
